

Role 1: Data Engineer with Omniverse/Optimization Focus - £70k + Equity

Consolidated Role Profile

Position: Data Engineer (Omniverse & Optimization Specialist)

Seniority: Junior to Mid-Level (1-3+ years experience)

Priority: High

Type: Full-Time, Hybrid

Key Responsibilities

- Design, develop, and maintain data pipelines for geospatial data workflows in Nvidia Omniverse
- Implement and customize optimization algorithms (similar to Nvidia CuOpt, Gurobi, CPLEX)
- Integrate various data sources (Apache Kafka, S3) with Omniverse simulation environments
- Optimize data pipelines for performance and scalability using Apache Spark and Databricks
- Work with geospatial databases (PostGIS, ArcGIS)
- Deploy and manage optimization solutions on cloud platforms

Essential Skills & Requirements

- **Education:** Bachelor's degree in Computer Science, Data Engineering, Operations Research, or related field
- **Experience:** 1-3+ years in data engineering with exposure to optimization algorithms
- **Programming:** Strong Python and SQL proficiency
- **Platforms:** Experience with Nvidia Omniverse (highly desirable)
- **Tools:** Apache Spark, Databricks, PySpark
- **Optimization:** Familiarity with optimization frameworks (CuOpt, Gurobi, CPLEX)
- **Cloud:** AWS/Azure experience
- **Geospatial:** Experience with geospatial data and databases (PostGIS, ArcGIS)

None

Role 2: Digital Twin/Solutions Architect (Omniverse & AI Focus) - £70k+ Equity

Consolidated Role Profile

Position: Digital Twin Engineer / Solutions Architect (Omniverse & AI Specialist)

Seniority: Junior to Mid-Level (1-3+ years experience)

Priority: High

Type: Full-Time, Hybrid

Key Responsibilities

- Develop and deploy digital twins using Nvidia Omniverse and Unity/Unreal Engine
- Design and implement AI-driven solutions within Omniverse environments
- Integrate 3D models from CAD platforms (Revit, Rhino) into Omniverse
- Develop custom Omniverse extensions for 3D modeling and rendering challenges
- Create and test simulation scenarios for real-world industrial applications
- Integrate AI models (TensorFlow, PyTorch) into simulation projects

Essential Skills & Requirements

- **Education:** Bachelor's degree in Computer Science, Engineering, AI, or related field
- **Experience:** 1-3+ years in 3D simulation, digital twin development, or solutions architecture
- **Platforms:** Nvidia Omniverse, Unity, Unreal Engine
- **Programming:** C#, Python, Java
- **AI Frameworks:** TensorFlow, PyTorch (basic understanding)
- **3D/CAD:** Experience with Revit, Rhino, or similar CAD tools
- **Skills:** Strong analytical and problem-solving abilities
- **Communication:** Ability to explain technical concepts to diverse audiences
